Payli™

Company profile

Hospitality software built in Amman.
Pay at Table, the Restaurant Dashboard and the Order Pager.

Closed beta. Amman, Jordan.

Edition November 2026

Built in Amman for the last five minutes of dinner.

Payli is hospitality software built in Amman. It takes the two slowest moments of eating out, waiting to pay and waiting to collect, and moves them to the guest's own phone. The restaurant keeps an exact record of every one.

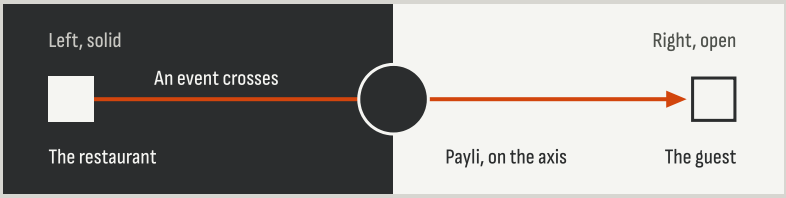

The end of a good meal is usually the worst part of it: waiting for the bill, waiting for the card machine, doing arithmetic at the table. Payli fixes those five minutes.

Payli makes two products and one dashboard. Pay at Table is in closed beta. Guests scan the QR code on their table, see the itemised bill, split it, tip and pay from their own phone. There is no app to download. The Restaurant Dashboard, also in closed beta, shows the floor, the payments and the end-of-day numbers in one browser. The Order Pager is in development. The guest's own phone replaces the buzzer at the counter.

Payli serves table-service restaurants and cafés. It serves counter service too: coffee shops, bakeries, fast food and food-court outlets. Behind them are the owners, managers, floor staff, counter staff and finance teams who run the day.

Payli is not a bank, not a payment company and not a POS. It is software that sits beside the payment and beside the till.

How to read this document

The restaurant is always on the left. The guest is always on the right. Payli sits on the axis between them, and time runs down the page. An orange line marks an event that crosses from one side to the other. Nothing else in this document is orange.

Status, November 2026

In closed beta

Pay at Table

Restaurant Dashboard

In development

Order Pager

Built and shown in demos. Not yet live at any venue.

AQUA POS connector

Foodics connector

Planned

Oracle MICROS Simphony connector

POSRocket connector

"In development" means the connector is being built and tested against the vendor's test system. It is not live at any restaurant. "Planned" means not built yet. No dates are given.

The company

Payli is operated by a company registered in the Hashemite Kingdom of Jordan, and is based in Amman.

Payli is in closed beta and is talking to its first restaurants. No restaurant is live yet.

info@payli.io
+962 7 9953 8005
payli.io

Payli is software. It never holds your money.

Payli is

- ■ Software for the table, the counter and the back office.
- ■ A record. Every payment is kept in whole fils, in an append-only ledger.
- ■ A link to your POS. The bill comes from it. The finished sale goes back to it.

Payli is not

- □ A bank or a payment company. A licensed payment provider processes each payment.
- □ A POS. It sits beside the till and does not replace it.
- □ Certified. Payli itself hasn't yet been independently audited or certified, including against PCI DSS, and doesn't claim to be.

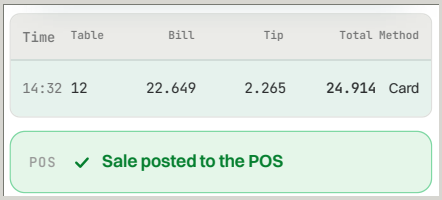

What Payli holds itself to

Four working principles. Each one can be checked on a screen.

Exact to the fils

Money is recorded in whole fils in a double-entry ledger. Nothing is rounded to make a screen look tidy.

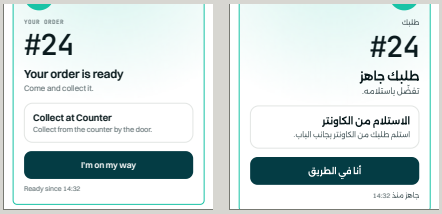

Shown: a payment as the restaurant sees it, with bill, tip and total in JOD to three decimals.

Both languages for every guest

English and Arabic on every guest screen, chosen by the guest.

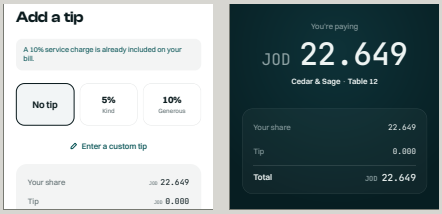

Shown: the same order page at the Ready moment, in English and in Arabic.

No surprises at the table

Guests see exactly what they will pay before they pay it. Tips go to the restaurant in full.

Shown: the tip step and the pay screen, with share, tip and total before the guest presses "Pay by card".

Honest about the beta

Payli is in closed beta. It says what works today and what is coming, in this document and in every demo.

Shown: the label every demo screen carries.

Cedar & Sage is a fictional venue used for illustration.

The meal is over. The wait begins.

Two waits slow a restaurant down: the wait to pay at the table, and the wait to collect at the counter. Each has a restaurant side and a guest side.

What the team waits on

The bill run and the terminal run
Each one takes a member of staff off the floor at the busiest moment. Splitting a bill six ways at the table is arithmetic nobody trained for.

The close
Payments, tips and POS sales are counted separately and reconciled by hand. Tips get mixed with sales. Numbers that should match do not.

The buzzers
Payli's product notes record the trade's own words: they walk off, run flat and get sticky. They are hardware to buy, charge, clean and replace.

What the guest waits on

The bill
The meal is over and the guest is ready to leave. The bill has to be asked for, printed, carried, split by hand and paid on a terminal that is on another table.

The last five minutes are the least hospitable part of the evening. They are the part the guest remembers on the way out.

The order
Guests who have ordered stand and wait, because they do not know how long it will take. Or they sit down with a plastic buzzer.

The opportunity

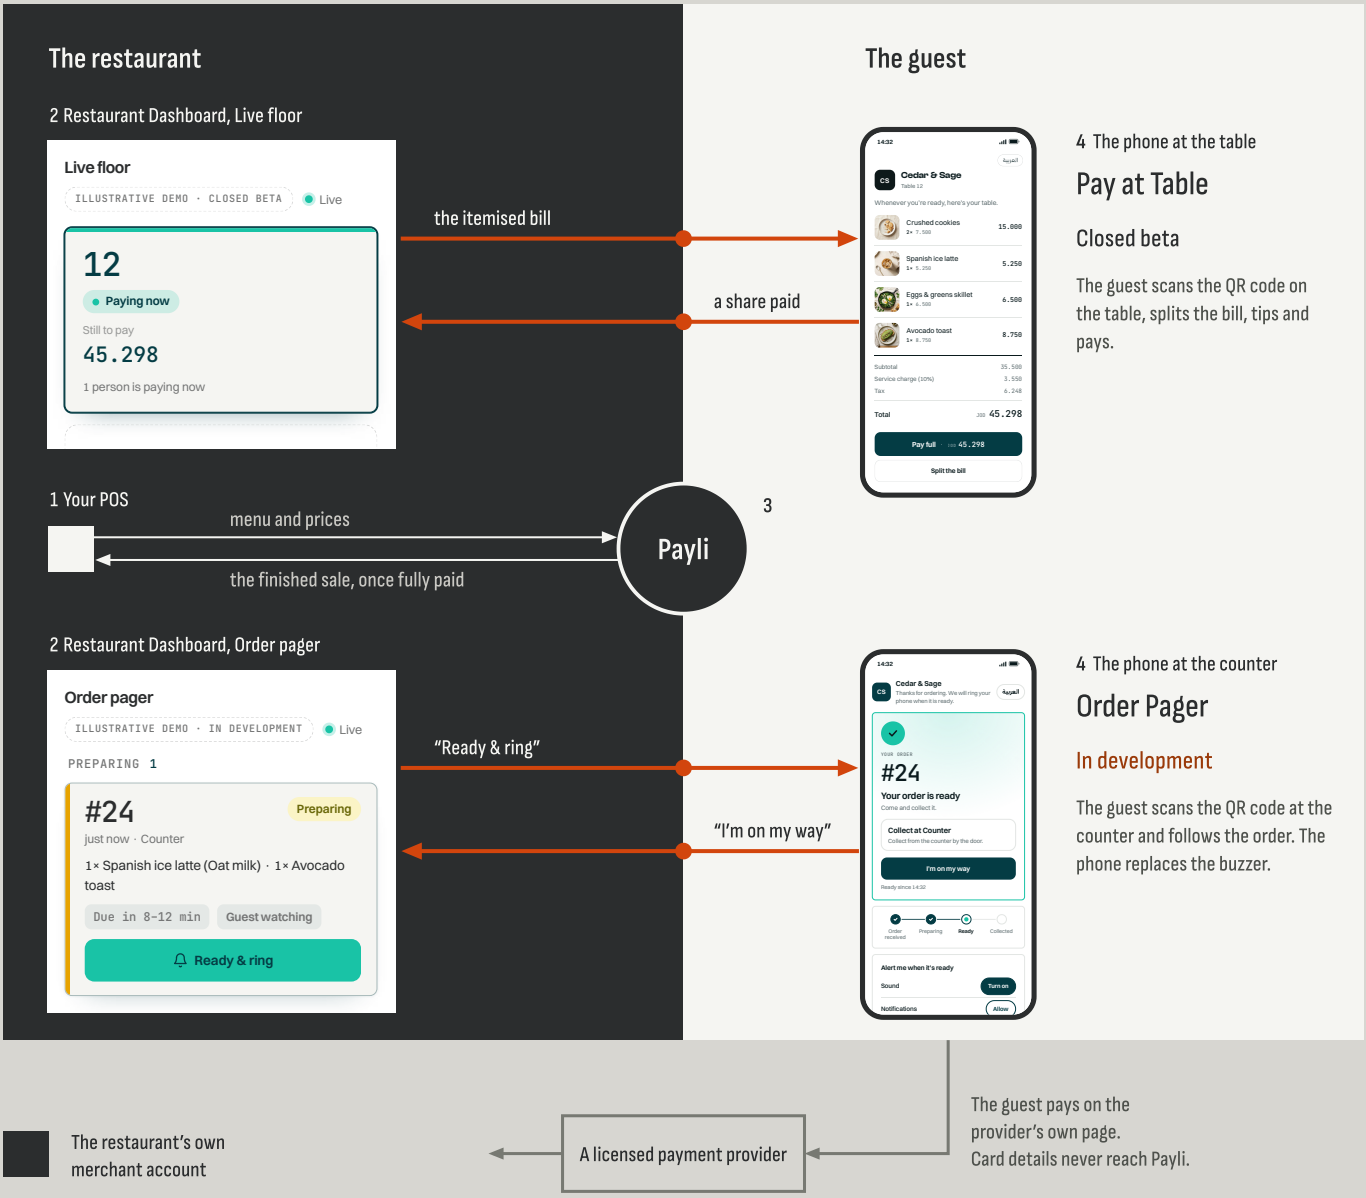

Every guest already carries a better device than any restaurant could hand them. Payli puts the bill, the split, the tip and the order alert on that device, with nothing to install, and gives the restaurant the record.

Plating at the pass. The team's attention belongs here, not on a bill run.

How the parts connect.

Two products and one dashboard. The restaurant's screens are on the left and the guest's phone is on the right. Payli sits on the axis and passes data between them.

Data crosses Payli. Money does not.

Payli sits beside the payment, never in it.

1 Your POS

It gives Payli the menu and prices, so the bill on the phone matches the one your team rang up. AQUA POS and Foodics connectors are in development. Oracle MICROS Simphony and POSRocket are planned.

2 Restaurant Dashboard

One browser dashboard for the floor, the payments and the end-of-day numbers. It runs on any tablet, phone or laptop. In closed beta, in English.

3 Payli

It sends the bill, records the payment and posts the sale to the POS. It handles data only, never money. Its fees are invoiced separately, never deducted.

4 The guest's phone

A QR code opens the page in the phone's browser. No app, no account. Guest screens are in English and Arabic.

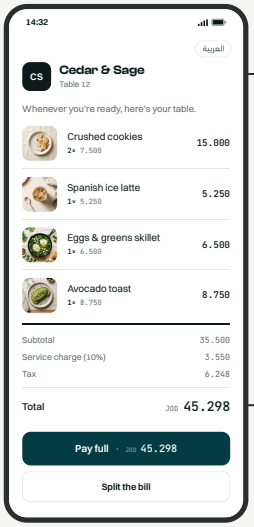

Pay at Table

Status: **closed beta**

Guests scan the QR code on their table, see the itemised bill, split it, tip and pay from their own phone. There is no app, no sign-up and no Wi-Fi password.

1 Scan

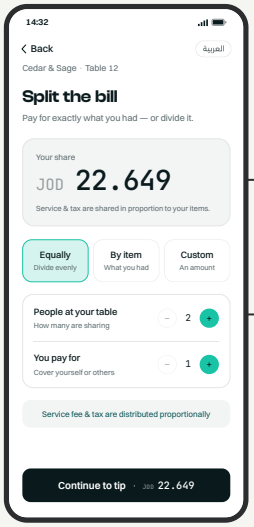

One QR code per table. The itemised bill opens in the phone's browser.

Subtotal, service charge and tax are itemised. The total is in JOD to three decimals.

2 Split

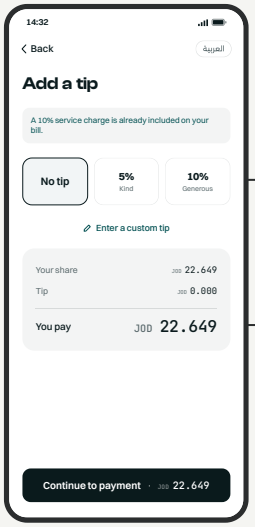

Evenly, by item, or any amount. The share is shown before the guest commits.

The guest says how many people share, and how many shares they cover.

3 Tip

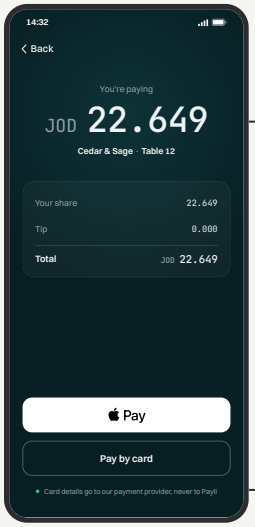

5%, 10%, a custom amount, or none. Payli takes no fee on tips.

Share, tip and the amount to pay, before the guest continues.

4 Pay

The amount, the venue and the table, once more.

Card details go to the payment provider's page. They never reach Payli.

Splitting

Evenly, by item, or any amount. Service charge and tax follow the items in proportion. Nobody can pay twice for the same item. The table stays open until the last share is paid.

On the screen
"Split the bill"
"Equally", "By item", "Custom"

Tipping

5%, 10%, a custom amount, or none. Payli takes no fee on tips. The full tip goes to the restaurant.

On the screen
"Add a tip"
"No tip", "5%", "10%"

Paying

Visa or Mastercard. Apple Pay or Google Pay where the payment provider enables them. The guest pays on the provider's own secure page. Card details never reach Payli.

On the screen
"You're paying"
"Pay by card"

Afterwards

A confirmation on screen. Staff can view and print a receipt. The guest can leave a rating from one to five stars and a comment. Guest screens are in English and Arabic.

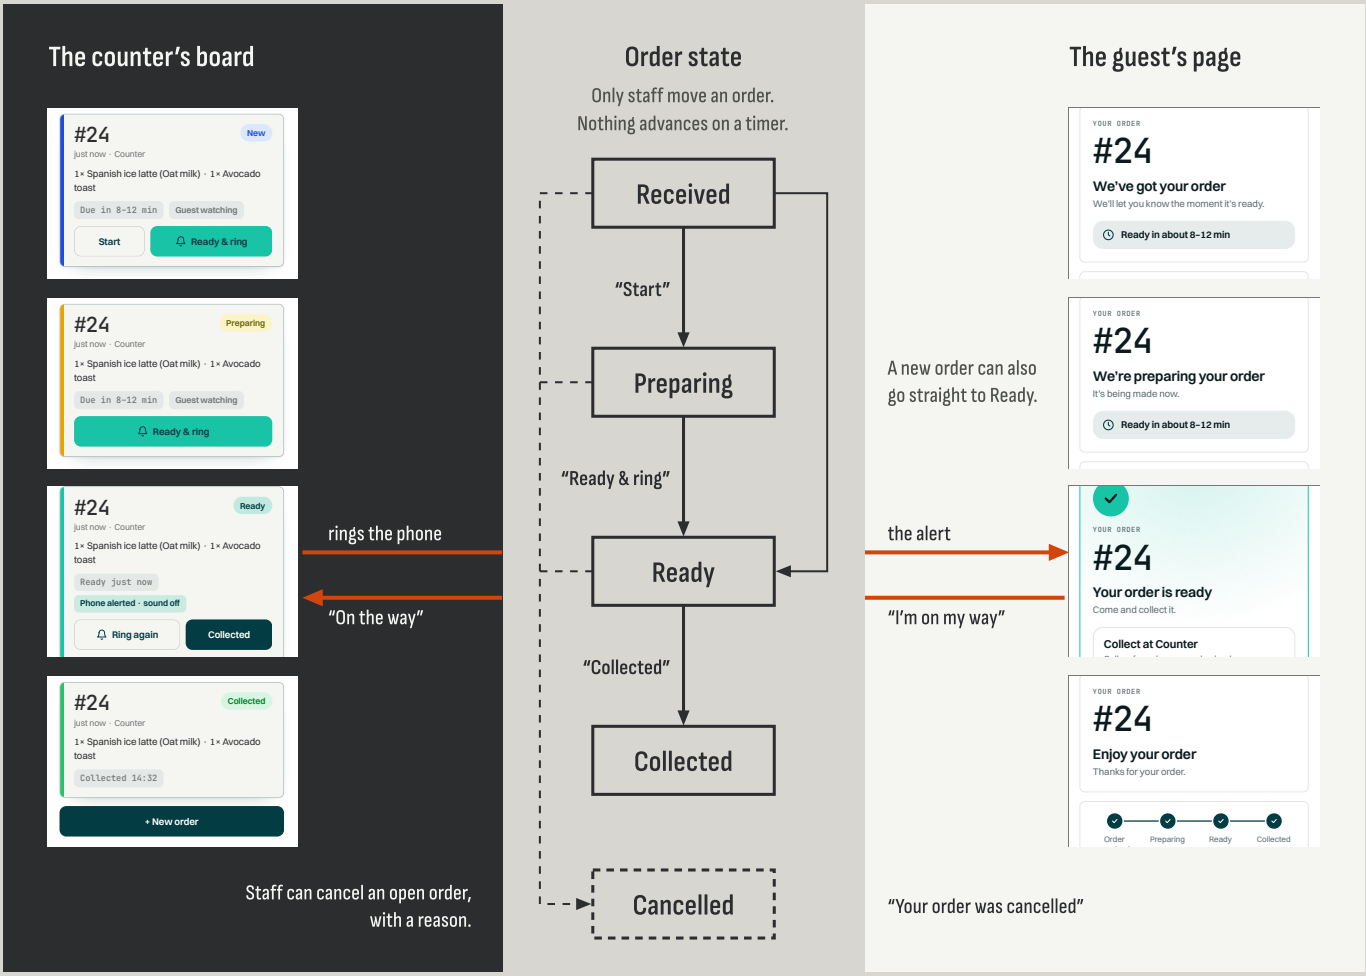

On the screen
"You're good to go"

Cedar & Sage is a fictional venue used for illustration. Screens are drawn from the product in closed beta.

Order Pager

Status: in development
Built and shown in demos. Not yet live at any venue.

The guest's own phone replaces the buzzer. The guest scans a QR code at the counter, follows the order and gets an alert when it is ready.

Joining

The guest scans the QR code at the counter. No app, no account, no phone number. The page shows the order number, a timeline and a time estimate.

Estimates

A fixed range, a range computed from the items and the kitchen's stations, or none. Staff can move it by −5, +5 or +10 minutes. If the time passes, the page says "Taking a little longer than expected". It never invents a number.

Alerts

The order page updates live. It chimes when sound is on and, on Android, vibrates. With permission it also shows a notification. It follows the phone's own sound settings.

Ring again

If the guest does not come, staff press "Ring again" after a short cooldown. The board reports that the phone received the alert, never that someone heard it.

Appearance

Logo, colours, one of three themes, welcome line, pickup instructions and the wording of each status, in English and Arabic. Starting templates cover a coffee shop, fast food, a bakery, a food-court outlet and casual dining.

Beside any till

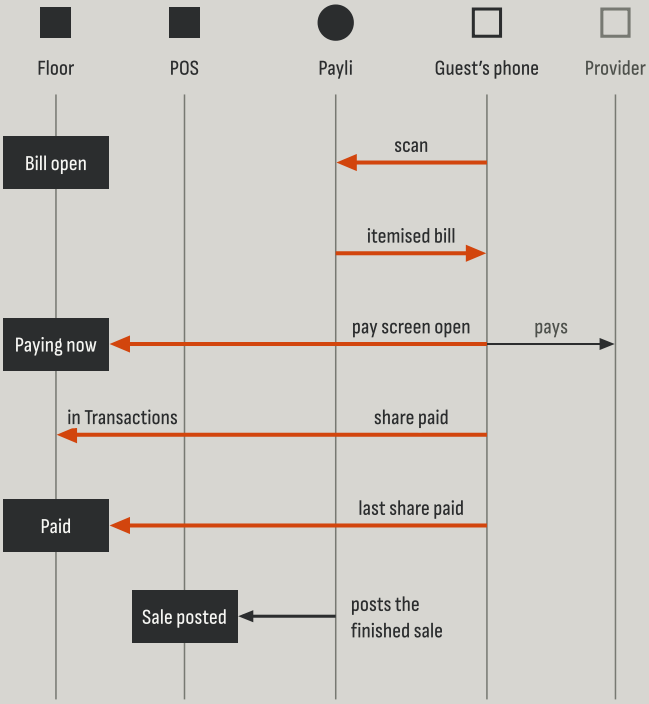

Staff create the order after taking payment however they do today. The Order Pager lives in the same dashboard and the same guest web app as Pay at Table.

Order Pager is in development and not yet live at any venue. Cedar & Sage is a fictional venue used for illustration.

One table. One order. One day.

At the table

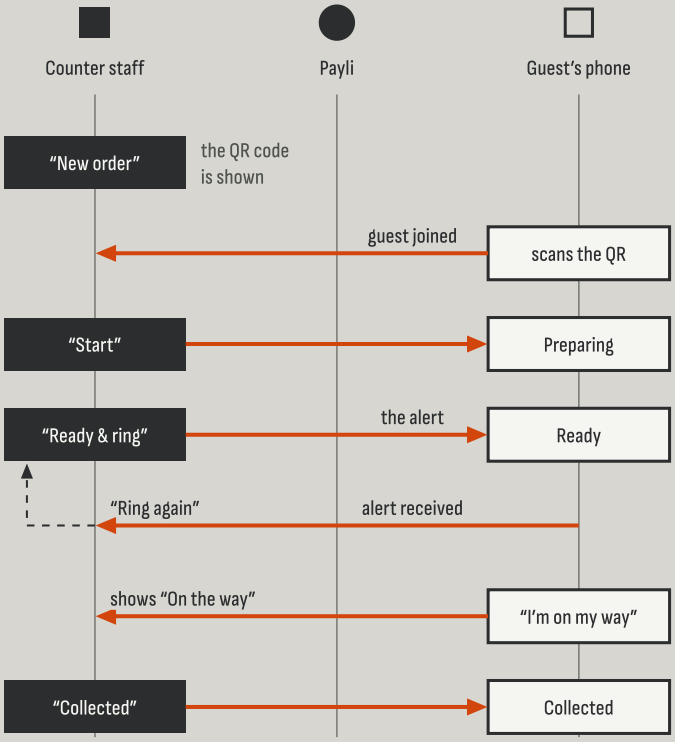

Pay at Table, closed beta. One table, from first scan to close.

Only a fully paid bill is posted to the POS. Partial payments never are. The guest pays on the provider's page; card details never reach Payli.

At the counter

Order Pager, in development. One order, from the counter to the hand-over.

The restaurant's day

Before service

The menu and the tables are in the dashboard. Each table has its QR code.

During service

The floor shows every table's state and the team stays with guests. At the counter, orders move across the board and phones ring instead of buzzers.

At the close

Transactions export as a spreadsheet. Tips sit apart from sales. Only fully paid bills have reached the POS.

The pass during service. Photograph for illustration; it does not show a Payli restaurant.

Who it is for, and why.

Segment	What Payli does there	Product	Status
Table-service restaurants, casual to premium	Guests pay from the table when they are ready. The floor shows every table's state.	Pay at Table, Restaurant Dashboard	Closed beta
Cafés with seating	When guests can pay from their seat, the queue at the till gets shorter and your team stays on the floor.	Pay at Table, Restaurant Dashboard	Closed beta
Counter service: coffee shops, bakeries, fast food, food-court outlets	The guest's own phone replaces the buzzer. Staff ring it from the board.	Order Pager	In development
Restaurant groups	Each venue is set up with its own menu, tables, team and settings. Its data is kept separate from every other venue's. Tell us how your group is organised and we will show what is ready.	Set up venue by venue	Ask us
POS vendors and payment providers	Payli connects to the POS for the menu and the finished sale, and to a licensed provider's hosted payment page.	Connections	Write to info@payli.io

Who uses what

■ works here ☐ sees this. The dashboard is in English today.

Role	Live floor	Order pager	Menu	Financial Transactions	The guest's phone	What they do
Owner				☐		Decides. Sees the numbers.
Manager			■	■		Menu, refunds and settings.
Floor staff	■			■		The live floor and receipts.
Counter staff		■				The order board.
Finance				■		Transactions, the CSV export and the ledger.
Guest					■	Scans, pays, follows an order. No account.

Why consider Payli

- It is honest about its stage. It says what is ready.
- It never touches the restaurant's money.
- It is exact: whole fils, an append-only ledger, only fully paid bills in the POS.
- It asks nothing of the guest. No app, no account, no phone number.
- It is built in Amman, in English and Arabic, for how restaurants here work.
- It needs no hardware.

What the restaurant gains

Tables free up sooner at the end of the meal

Guests pay when they are ready, without waiting for staff.

The team stays on the floor

No bill run and no terminal run.

Split bills without disputes

Evenly, by item or any amount. Nobody pays twice for the same item.

Tips recorded cleanly

A tip step on every payment. Tips are shown apart from sales. No Payli fee on tips.

An exact close

An append-only ledger to the fils, a spreadsheet export, and only fully paid bills in the POS.

Your money stays yours

It settles to your own merchant account. Payli's fees are invoiced, never deducted.

Getting started

Five steps, in this order. There is no hardware to buy.

1 **See it on your phone**
A 15-minute walkthrough of the guest's side and yours.

2 **Check the fit**
Your POS, your payment provider, and what is ready for your venue.

3 **Set up your venue**
We create your venue, connect your POS and bring in your menu and service charge.

4 **A QR on every table**
Add your tables in the dashboard and print a QR for each.

5 **Brief the team**
The floor board, receipts and refunds.

Book a 15-minute walkthrough

On your own menu. Write to info@payli.io

Email info@payli.io
Phone +962 7 9953 8005
Web payli.io

Sunday to Thursday, business hours in Amman. We reply within one business day, in English or Arabic.

What you need

A POS Payli connects to, or one you would like us to connect.

A merchant account with a licensed payment provider.

Any tablet, phone or laptop with a browser.

A printed QR code for each table.

Terms

There is no published price list. Pricing depends on the venue and is covered in the walkthrough.

Fees are invoiced separately, never deducted.

There is no fee on tips.

We're choosing a small first group of restaurants in Amman.

Other enquiries

Partnerships, press and product questions: info@payli.io. For press, put "Press" in the subject line.

Payli is in closed beta in Amman, Jordan. No restaurant is live yet.

Order Pager is in development and not yet live at any venue.

Cedar & Sage is a fictional venue used for illustration.

Payli is operated by a company registered in the Hashemite Kingdom of Jordan. Payli at payli.io is not affiliated with other companies or apps that use the name Payli or PayLi.
