

Payli™

Take a seat. We'll ring your phone.

Company profile

Edition November 2026

On the phone: the Order Pager, in development and not yet live at any venue. Cedar & Sage is a fictional venue used for illustration.

Built in Amman for the last five minutes of dinner.

The end of a good meal is usually the worst part of it: waiting for the bill, waiting for the card machine, doing arithmetic at the table. Payli fixes those five minutes, and gives the restaurant an exact record of every one of them.

Payli is hospitality software. It takes the two slowest moments of eating out, waiting to pay and waiting to collect, and moves them to the phone already in your pocket. You scan a QR code. No app to download, no account to open, no phone number to give.

At the table, that is Pay at Table, in closed beta: you see the itemised bill, split it, tip and pay from your seat. At the counter, it is the Order Pager, in development: your own phone replaces the plastic buzzer and tells you when your order is ready. Behind both sits the Restaurant Dashboard, in closed beta: one screen in a browser for the floor, the payments and the end-of-day numbers.

Payli serves table-service restaurants and cafés, counter service such as coffee shops, bakeries, fast food and food-court outlets, and the owners, managers, floor and counter staff and finance teams behind them.

Payli is not a bank, not a payment company and not a POS. It is software that sits beside the payment and beside the till.

Payli is in closed beta in Amman, Jordan, and is talking to its first restaurants. No restaurant is live yet.

Payli

Based in Amman, Jordan.
Operated by a company registered in the Hashemite Kingdom of Jordan.

payli.io

We reply within one business day, in English or Arabic.

What we hold ourselves to.

Payli sits beside the payment and beside the till. Four principles sit behind every screen your guest sees and every number you read at the close.

Exact to the fils.

Money is recorded in whole fils in a double-entry ledger. Nothing is rounded to make a screen look tidy.

Both languages for every guest.

English and Arabic on every guest screen, chosen by the guest.

No surprises at the table.

You see exactly what you will pay before you pay it. Tips go to the restaurant in full.

Honest about the beta.

Payli is in closed beta. We say what works today and what is coming, in this profile and in every demo.

The bill for Table 12 in Arabic, as the guest chose it. Pay at Table, closed beta. Cedar & Sage is a fictional venue used for illustration.

Two waits.

One comes at the end of the meal, when you are ready to leave. The other starts at the counter, the moment you have ordered.

At the table. The meal is over and you are ready to go. But the bill has to be asked for, printed, carried, split by hand and paid on a terminal that is on another table. The last five minutes are the least hospitable part of the evening, and they are the part you remember on the way out.

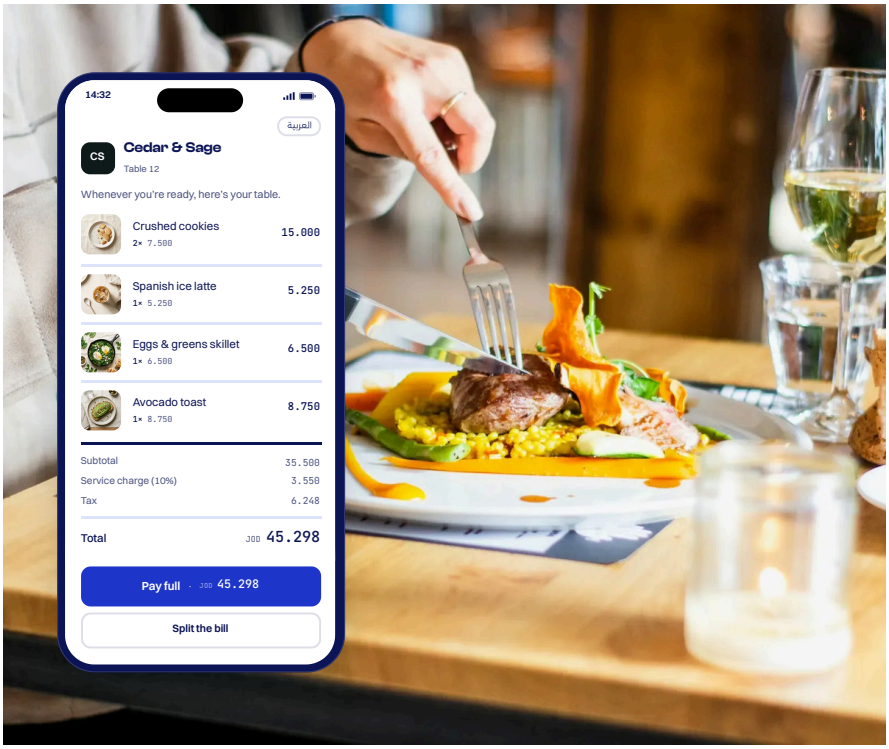

For the team. Every bill run and terminal run takes a member of staff off the floor at the busiest moment. Splitting a bill six ways at the table is arithmetic nobody trained for.

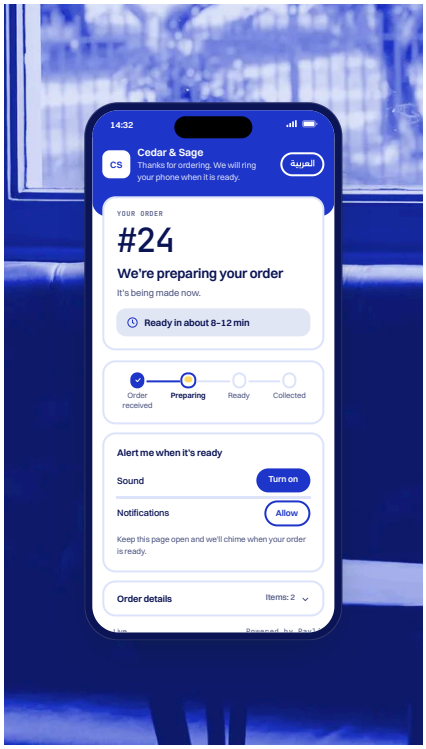

At the close. Payments, tips and POS sales are counted separately and reconciled by hand. Tips get mixed with sales. Numbers that should match do not.

At the counter. You have ordered, and now you stand and wait because you do not know how long it will take. Or you sit down with a plastic buzzer. Buzzers walk off, run flat and get sticky. They are hardware to buy, charge, clean and replace.

Every guest already carries a better device than any restaurant could hand them.

Payli puts the bill, the split, the tip and the order alert on that device, with nothing to install, and gives the restaurant the record.

Pay at Table

Closed beta

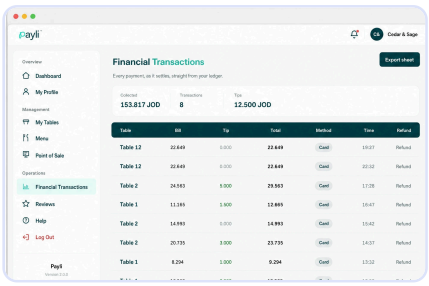

You scan the QR on your table, see the itemised bill, split it, tip and pay from your own phone. No app.

Meanwhile, on the floor: your table changes state on the live floor, and only a fully paid bill reaches the POS.

Order Pager

In development

Your own phone replaces the buzzer: scan a QR at the counter, follow your order, get an alert when it is ready. Built and shown in demos; not yet live at any venue.

Restaurant Dashboard

Closed beta

One browser dashboard for the floor, the payments and the end-of-day numbers. It runs on any tablet, phone or laptop, and is in English today.

Order Pager

Order Pager is in development and not yet live at any venue.

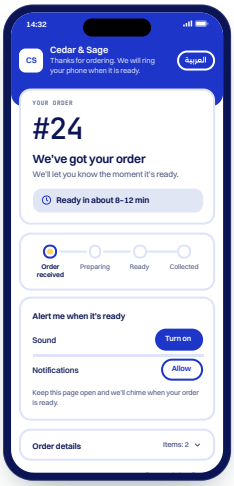

How the alert reaches you: the order page updates live, chimes when sound is on and, on Android, vibrates. With permission it also shows a notification. It follows your phone's own sound settings.

Your order is ready.

You order at the counter, scan a QR code and sit down. No app, no account, no phone number. The page shows the restaurant's name, your order number, a timeline and a time estimate. When the counter presses Ready & ring, your phone says where to collect, and you tap I'm on my way.

The counter sees whether you have joined, whether your phone received the alert, and that you are on the way. It never claims that someone heard it.

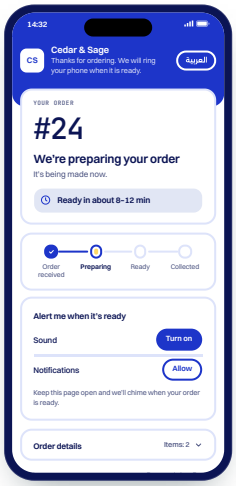

Scan — **Follow** — **Ring** — **Collect**

We've got your order.

You scan the QR at the counter.

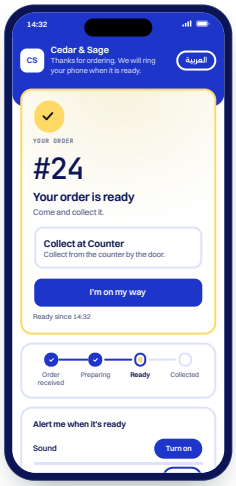

Meanwhile, at the counter: New order; the QR is shown.

We're preparing your order.

You sit down. The estimate is on the page.

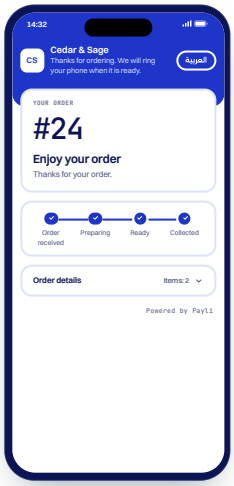

Meanwhile: Start. If it runs late, +5 min.

Your order is ready.

Your phone chimes if you turned sound on.

Meanwhile: Ready & ring.

Enjoy your order.

You collect it at the counter.

Meanwhile: Collected.

You’re good to go.

The meal is over and you are ready. You scan the QR on your table and the itemised bill opens in your phone’s browser. You split it, add a tip or none, and pay. Every screen is in English and Arabic, and amounts are in JOD to three decimals.

Pay at Table

Pay at Table is in closed beta in Amman.

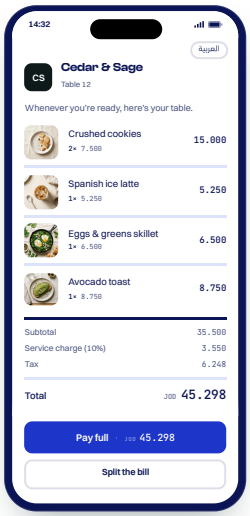

1

Scan.

One QR code per table. No app, no sign-up, no Wi-Fi password.

Meanwhile, on the floor: Table 12 shows Bill open.

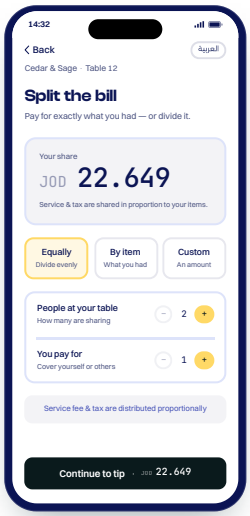

2

The bill.

Itemised, with service charge and tax, as your table was rung up.

Meanwhile: nothing to print, nothing to carry.

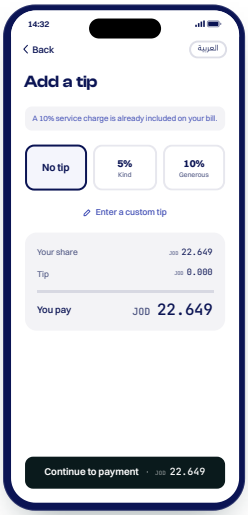

3

Split.

Evenly, by item, or any amount. Nobody can pay twice for the same item.

Meanwhile: nothing to do; no bill run.

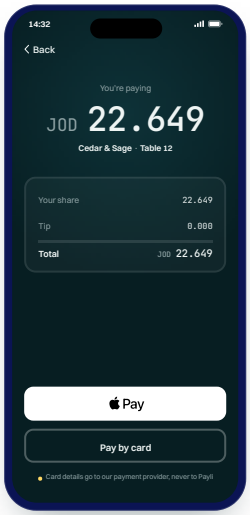

4

Tip.

5%, 10%, a custom amount, or none. The full tip goes to the restaurant.

Meanwhile: Payli takes no fee on tips.

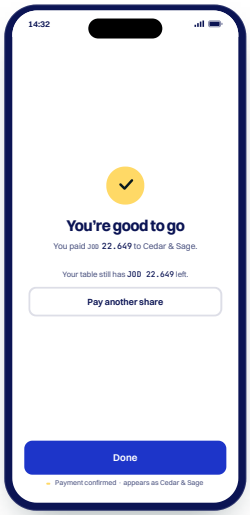

5

Pay.

By card, on the payment provider’s own secure page. Card details never reach Payli.

Meanwhile: Table 12 shows Paying now.

6

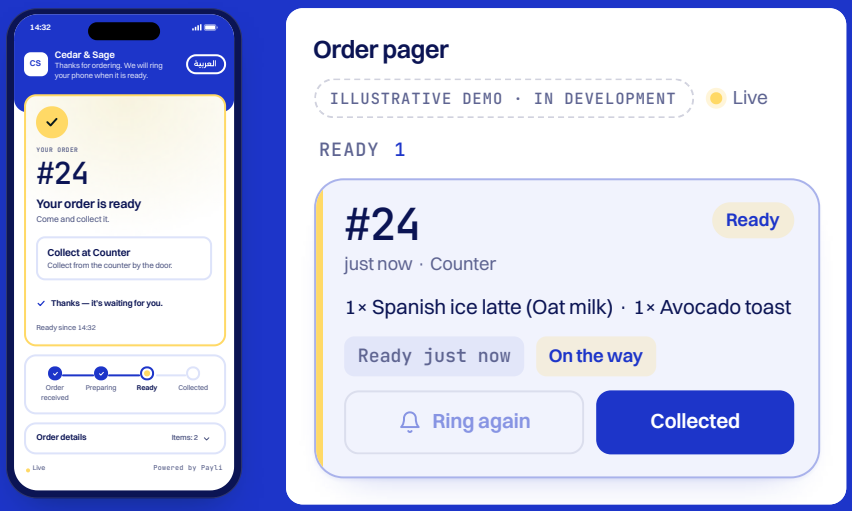

Paid.

A confirmation on screen, and a rating from one to five stars if you like.

Meanwhile: the payment appears in Transactions. When the last share is paid, the sale is posted to the POS.

Same moment, two screens.

Whatever you do on your phone, the restaurant sees on its own screen as it happens. The Restaurant Dashboard runs in a web browser on any tablet, phone or laptop, and is in English today.

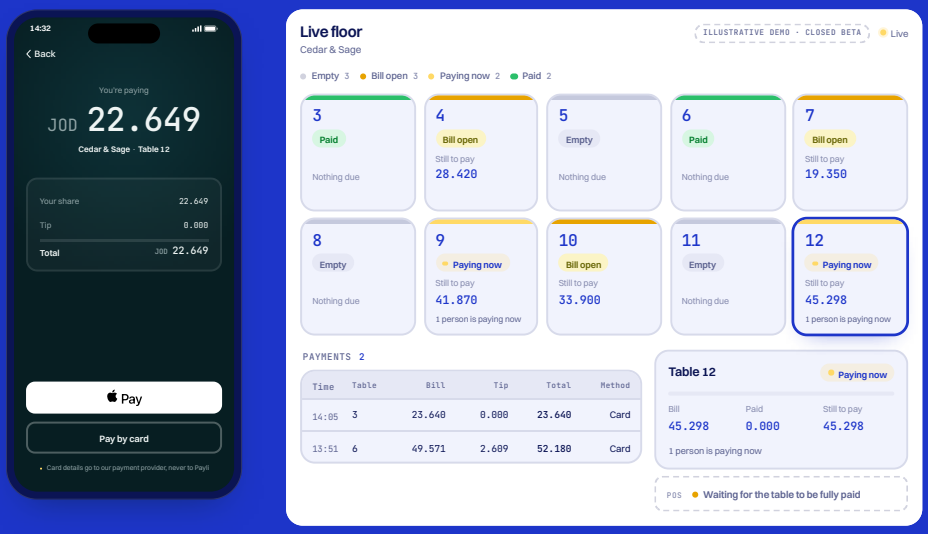

At the counter

You tap I'm on my way.

Meanwhile, the card for order #24 shows On the way. Only staff move an order; nothing advances on a timer.

Order Pager, in development.

At the table

You are about to pay your share.

Meanwhile, on the floor, Table 12 shows Paying now. Every table shows one of four states: Empty, Bill open, Paying now or Paid, made to be read from across the room.

Pay at Table, closed beta.

The restaurant's day

Before service

The menu and tables are in the dashboard and each table has its QR.

During service

The floor shows every table's state and the team stays with guests.

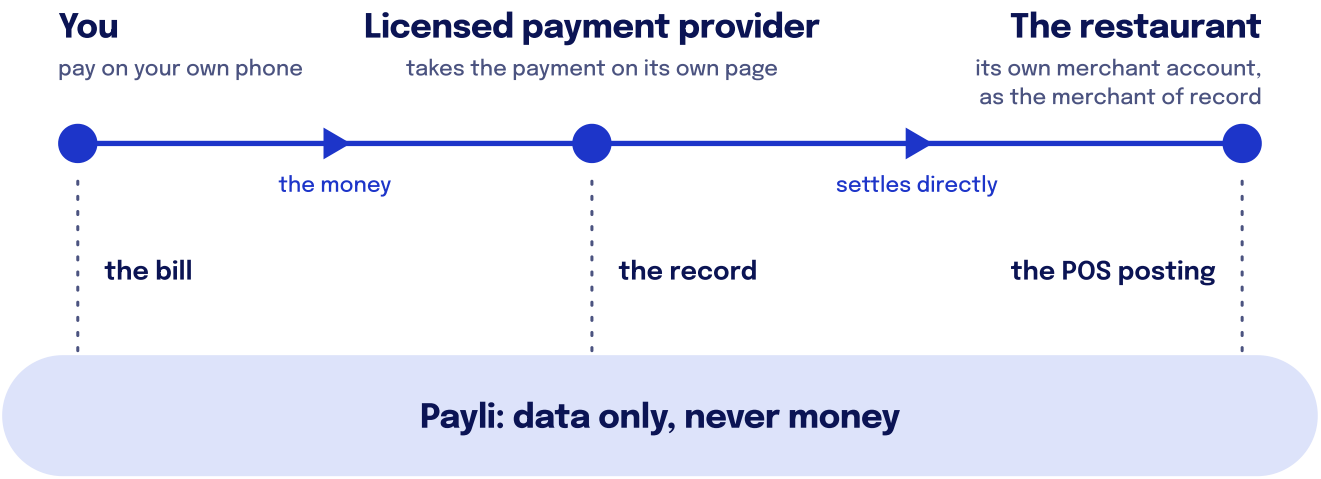

At the counter

Orders move across the board and phones ring instead of buzzers.

At the close

Transactions export as a spreadsheet, tips sit apart from sales, and only fully paid bills are in the POS.

Payli is software. It never holds your money.

Payli sits beside the payment, never in it.

When you pay, the payment goes through a licensed payment provider and settles directly into the restaurant's own merchant account. The restaurant is the merchant of record. Payli sends the bill, records the payment and posts the sale to the POS. It never holds, pools or pays out funds.

Payli's own fees are invoiced separately, never deducted, and there is no Payli fee on tips. A refund starts in the dashboard and is returned by the provider to the original card. Payli never funds or holds a refund.

Beside the till. Your POS gives Payli the menu and prices, so the bill on the phone matches the one your team rang up. Payli sends your provider only the amount to charge; card details stay on the provider's page. When the table is fully paid, the finished sale goes back into your POS with its items, tax, service, tip and tender. Partial payments are never posted.

POS connections

AQUA POS	In development
Foodics	In development
Oracle MICROS Simphony	Planned
POSRocket	Planned

In development: the connector is being built and tested against the vendor's test system and is not live at any restaurant. Planned: not built yet.

We confirm which payment provider is available for your venue in the walkthrough.

Payli itself hasn't yet been independently audited or certified, including against PCI DSS, and doesn't claim to be.

Who Payli is for.

The owner, the manager, the floor and counter staff, the finance team, and the guest at the table.

Table-service restaurants, casual to premium
Pay at Table and the Restaurant Dashboard, both in closed beta.

Cafés with seating
When guests can pay from their seat, the queue at the till gets shorter and your team stays on the floor.

Counter service
Coffee shops, bakeries, fast food and food-court outlets: the Order Pager, in development and not yet live at any venue.

Restaurant groups
Each venue is set up with its own menu, tables, team and settings, and its data is kept separate from every other venue's. Tell us how your group is organised and we will show what is ready.

Partners
POS vendors and payment providers: Payli connects to the POS for the menu and the finished sale, and to a licensed provider's hosted payment page. Partnership enquiries: info@payli.io

Why consider Payli

It is honest about its stage.
Closed beta, first restaurants being chosen now, and it says what is ready.

It asks nothing of the guest.
No app, no account, no phone number.

It never touches your money.
Payments settle to your own merchant account.

It is built in Amman.
In English and Arabic, for how restaurants here work.

It is exact.
Whole fils, an append-only ledger, only fully paid bills in the POS.

It needs no hardware.
Guests use their phones, staff use a browser, and you print a QR for each table.

One company for both waits: the bill at the table and the order at the counter.

Start with a walkthrough.

1. **See it on your phone.** A 15-minute walkthrough of the guest's side and yours.
2. **Check the fit.** Your POS, your payment provider, and what is ready for your venue.
3. **Set up your venue.** We create your venue, connect your POS and bring in your menu and service charge.
4. **A QR on every table.** Add your tables in the dashboard and print a QR for each.
5. **Brief the team.** The floor board, receipts and refunds.

What you need. A POS Payli connects to, or one you would like us to connect; a merchant account with a licensed payment provider; any tablet, phone or laptop with a browser; and a printed QR code for each table.

What it costs. There is no published price list. Pricing depends on the venue and is covered in the walkthrough. No hardware to buy. Fees are invoiced separately, never deducted. No fee on tips. We're choosing a small first group of restaurants in Amman.

Book a 15-minute walkthrough

Time with the Payli team, on your own menu: the guest's side and yours.
