Payli™

Pay at Table

and the Order Pager.

Pay at Table	closed beta
Order Pager	in development

Product and solution brochure

From both sides of the counter

Edition November 2026

Two waits, and one phone

The problem

The last five minutes of a meal are its slowest. The bill has to be asked for, printed, carried, split by hand and paid on a terminal that is on another table, and every one of those runs takes somebody off your floor.

At the counter, guests stand and wait without knowing how long, or sit down holding a plastic buzzer that has to be bought, charged, cleaned and replaced.

The idea

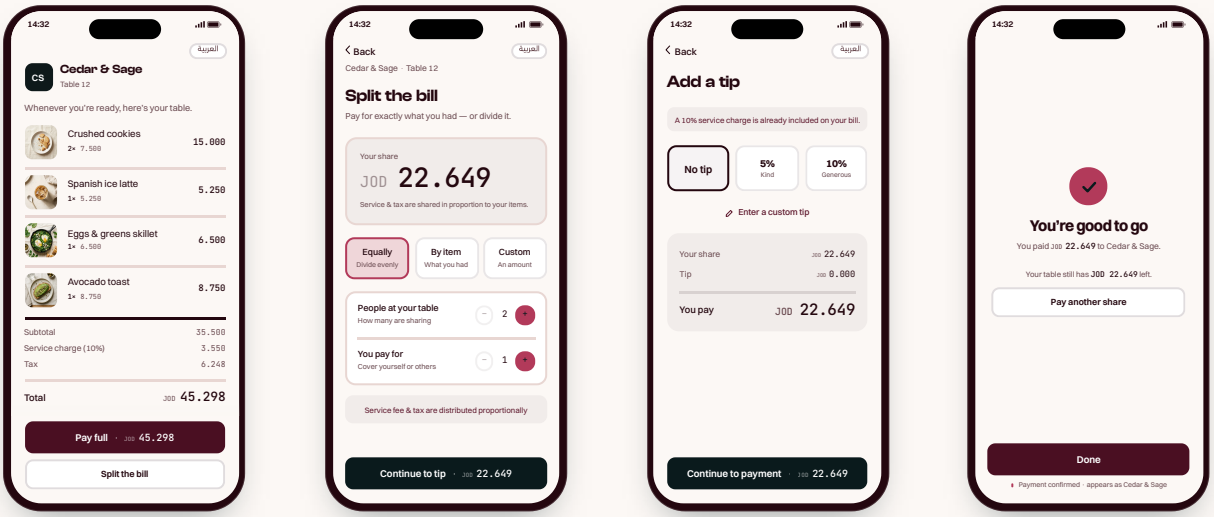

Every guest already carries a better device than any restaurant could hand them. With Pay at Table, the bill, the split, the tip and the payment are on that phone. With the Order Pager, so is the word that the order is ready.

There is nothing to install and no hardware to buy. The house keeps an exact record, and its money never passes through Payli.

Pay at Table, with the Restaurant Dashboard	Closed beta
Order Pager	In development; not yet live at any venue

On your guest's phone

Pay at Table: scan, split, tip and pay, with no app — Closed beta

1 Scan

The table's QR code opens the itemised bill in the phone's browser.

2 Split

Evenly, by item, or any amount. Nobody pays twice for the same item.

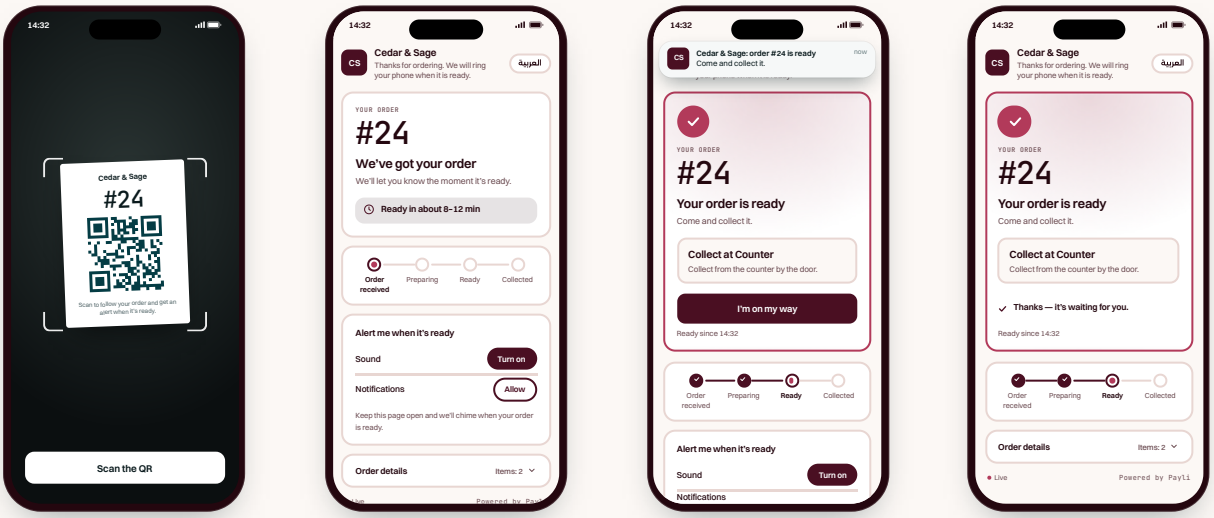

3 Tip

5%, 10%, a custom amount, or none. The tip goes to the restaurant in full.

4 Pay

By card on the payment provider's own page, then a confirmation on screen.

Order Pager: the phone is the buzzer — In development

1 Scan

A QR code at the counter: no app, no account, no phone number.

2 Follow

The order number, a timeline and an estimate, such as "8–12 min".

3 Ready

"Your order is ready", and where to collect it. The page chimes if sound is on.

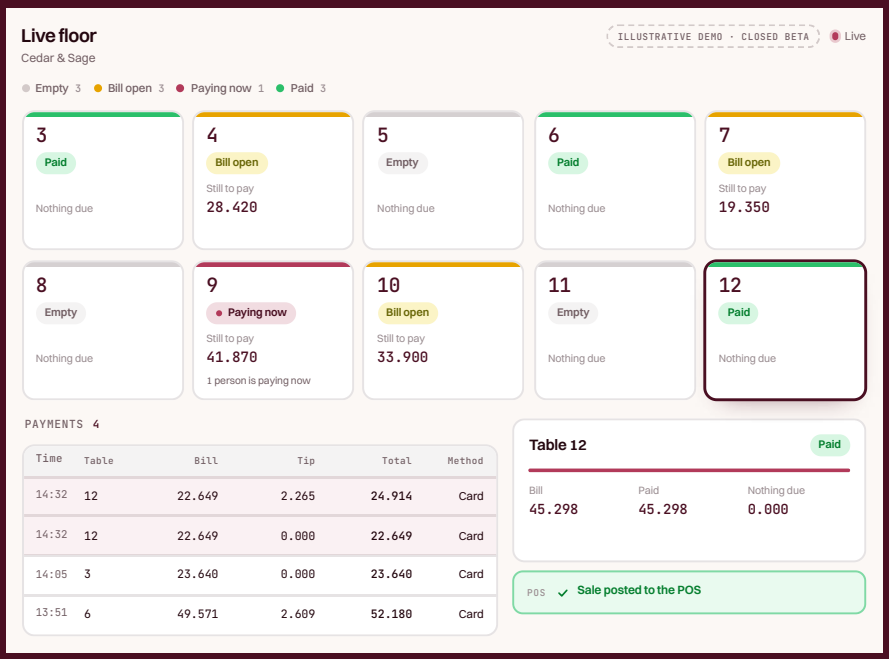

4 On the way

The guest taps I'm on my way, and the counter sees it.

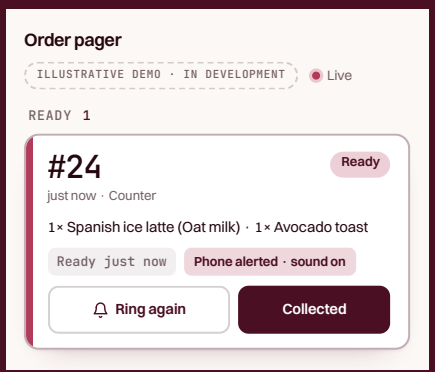

Every guest screen is offered in English and Arabic. Cedar & Sage is a fictional venue used for illustration.

For the house

One dashboard, in a web browser, on any tablet, phone or laptop you already own. It is in English today.

Live floor	Empty, Bill open, Paying now, Paid
Transactions	each payment as it happens; receipts, refunds, export
Ledger	double-entry, append-only, exact to the fils
Menu	from the POS where the integration supports it
Ratings	one to five stars, with a comment
POS posting	only a fully paid bill
Reconciliation	a three-way match, run on demand

At the counter

The Order Pager, in development, lives in the same dashboard. Your team presses New order, Start, then Ready & ring, and Collected at the hand-over. Only staff move an order.

Cedar & Sage is a fictional venue used for illustration.

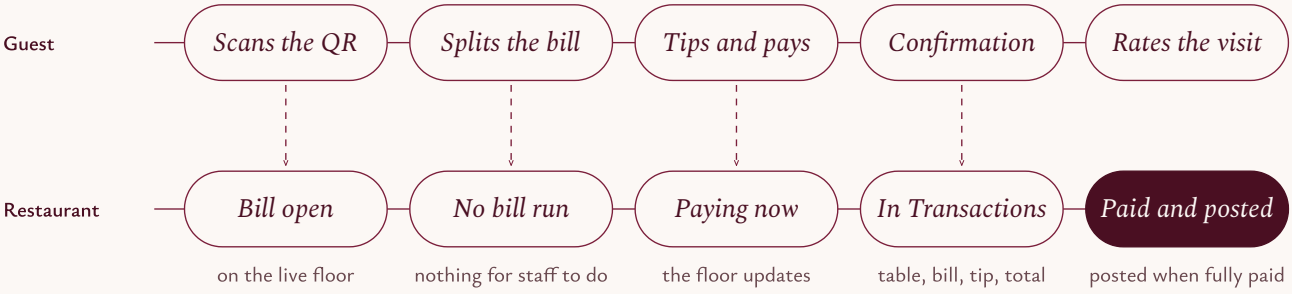

What it does for the house

What Payli does	What it means for the house
Guests pay from their own phones, when ready.	*Tables free up sooner at the end of the meal.*
Bill, split and payment happen at the table.	*Your team stays on the floor: no bill run, no terminal run.*
Bills split evenly, by item or by any amount.	*No disputes, and nobody pays twice for the same item.*
A tip step on every payment, apart from sales.	*Tips recorded cleanly, with no Payli fee on them.*
A ledger exact to the fils, and a CSV export.	*An exact close, with only fully paid bills in the POS.*
Payments settle to your own merchant account.	*Your money stays yours; fees are invoiced, never deducted.*
English or Arabic on every guest screen.	*Guests are served in their own language.*
A rating and a comment after paying.	*Feedback while it matters, in your dashboard.*
Guests use their phones; staff use a browser.	*Nothing to install, and no hardware to buy.*
The guest's phone is the pager (in development).	*No buzzers to buy, charge or lose; guests can sit down.*

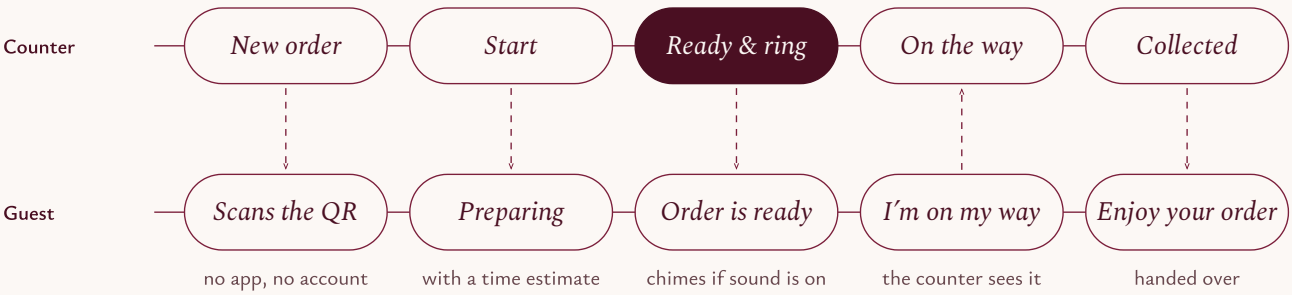

Pay at Table, from the first scan to the close

Closed beta

Order Pager, from the counter to the hand-over

In development

Dashed lines carry information only. The guest pays through a licensed payment provider, and the money settles directly into the restaurant's own merchant account.

Ask for fifteen minutes,

on your own phone.

What the walkthrough covers

We show you the guest's side and yours, on your own menu, and check the fit: your POS, your payment provider, and what is ready for your venue. We are choosing a small first group of restaurants in Amman.

What you will need

A POS that Payli connects to, or one you would like us to connect; a merchant account with a licensed payment provider; any device with a browser; and a printed QR code for each table. There is no hardware to buy. Pricing depends on the venue, and is covered in the walkthrough.

The same bill, in Arabic
