Pay at Table and the Order Pager,
from both sides of the counter.

The problem and the idea	2
For the guest	3
For the restaurant	4
Capabilities and business value	5
Walkthrough and contact	6

Pay at Table is in closed beta. Order Pager is in development and not yet live at any venue. Cedar & Sage is a fictional venue used for illustration.

Closed beta. Amman, Jordan.

Edition November 2026

The two slowest moments of eating out are waiting to pay and waiting to collect. Payli moves both to the guest's own phone, and gives the restaurant an exact record.

The restaurant, today

During service
Bill runs and terminal runs take staff off the floor at the busiest moment.

At the close
Payments, tips and POS sales are reconciled by hand. Tips get mixed with sales.

At the counter
Buzzers are hardware to buy, charge, clean and replace.

The guest, today

At the table
The bill is asked for, printed, carried, split by hand and paid on a terminal that is on another table.

At the counter
The guest stands and waits without knowing how long it will take, or sits down with a plastic buzzer.

The idea: the guest's phone does both jobs

Pay at Table
Closed beta

The guest scans the QR code on the table, sees the itemised bill, splits it, tips and pays. No app.

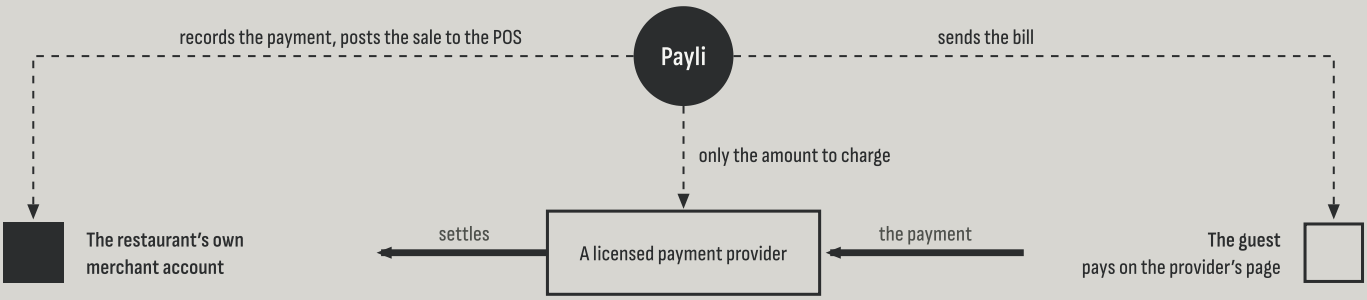

Restaurant Dashboard
Closed beta

One browser dashboard for the floor, the payments and the end-of-day numbers.

Order Pager
In development

The guest scans a QR code at the counter, follows the order and gets an alert when it is ready. Not yet live at any venue.

Payli is software. It never holds your money.

money ----- data only, never money

Payli sits beside the payment, never in it.

The restaurant is the merchant of record. Payli's fees are invoiced separately, never deducted, and there is no Payli fee on tips. Payli itself hasn't yet been independently audited or certified, including against PCI DSS, and doesn't claim to be.

For the guest: scan, and it opens.

Nothing to install and nothing to sign up for. Every guest screen is in English and Arabic, and amounts are in JOD to three decimals.

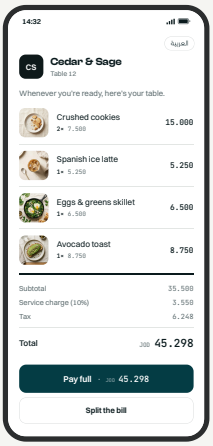

At the table

Pay at Table: closed beta

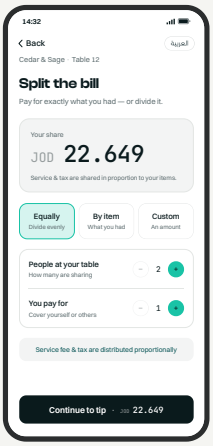

1 Scan

One QR code per table. No app, no sign-up, no Wi-Fi password.

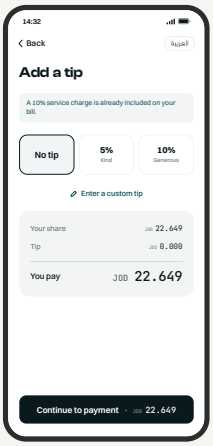

2 The bill

Itemised, with service charge and tax.

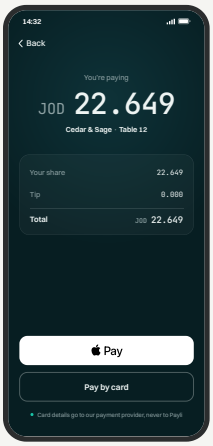

3 Split

Evenly, by item, or any amount.

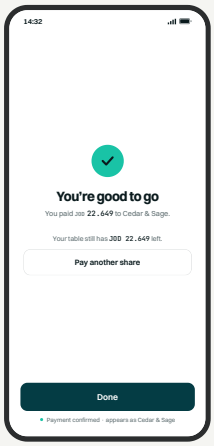

4 Tip

5%, 10%, a custom amount, or none.

5 Pay

On the payment provider's own secure page.

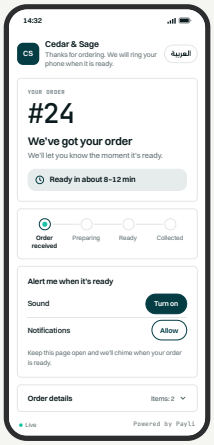

6 Done

Confirmation on screen. The table stays open until the last share is paid.

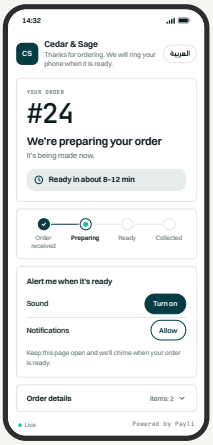

At the counter

Order Pager: in development, not yet live at any venue

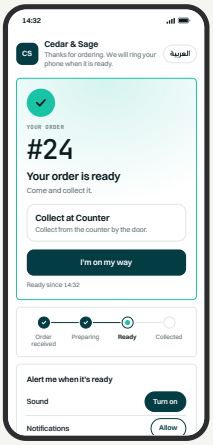

1 Received

"We've got your order", with an estimate.

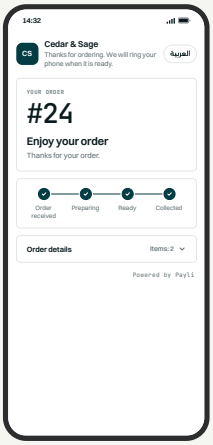

2 Preparing

"We're preparing your order".

3 Ready

"Your order is ready". The guest taps "I'm on my way".

4 Collected

"Enjoy your order".

How the alert reaches the phone

The order page updates live. It chimes when sound is on and, on Android, vibrates. With permission it also shows a notification. It follows the phone's own sound settings.

The guest turns on sound and notifications once. If the time passes, the page says "Taking a little longer than expected" and never invents a number.

No app

The QR code opens the page in the phone's browser.

No account

The guest signs up for nothing.

No phone number

The Order Pager does not ask for one.

No card details to Payli

They are entered on the provider's page.

Cedar & Sage is a fictional venue used for illustration.

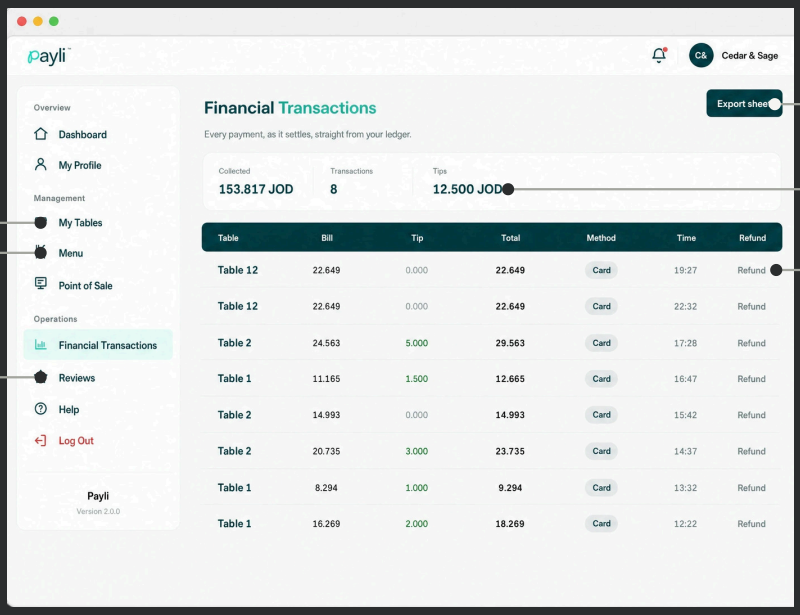

For the restaurant: one dashboard.

Restaurant Dashboard: **closed beta**
Runs in a browser. In English today.

My Tables
Add your tables and print a QR code for each.

Menu
Import from the POS where the integration supports it. Item names in both languages.

Reviews
Guest ratings and comments land here.

Export sheet
The day as a spreadsheet (CSV).

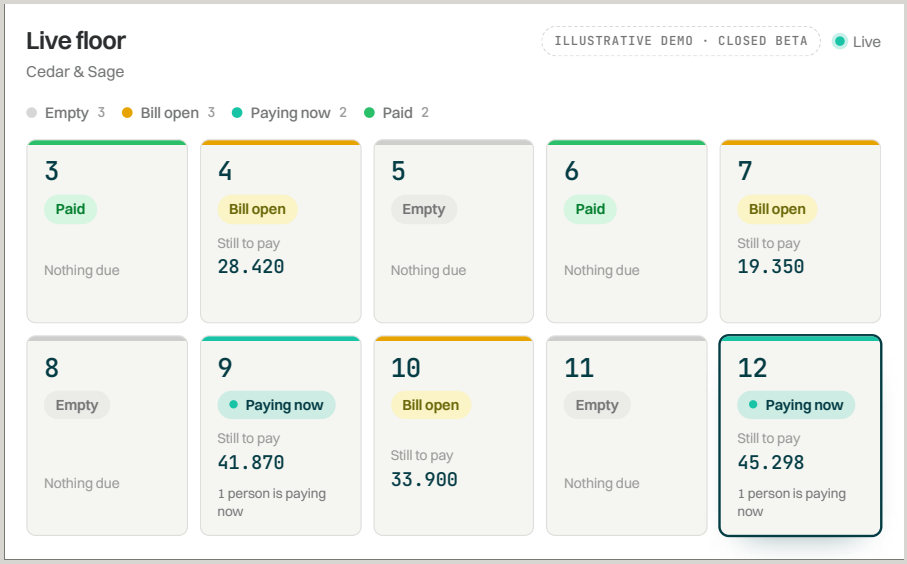

Tips
Shown apart from sales, exact to the fils.

Refund
From the same screen, recorded with who and why.

Financial Transactions: each payment with its table, bill, tip, total, method and time, as it happens. Capture of the product with demo data.

Live floor

Every table shows one of four states: Empty, Bill open, Paying now, Paid. It is designed to be read from across the room.

The close

A double-entry, append-only ledger, exact to the fils.

Tips are shown apart from sales.

The day exports as a spreadsheet (CSV).

Only a fully paid bill is posted to the POS. Partial payments never are.

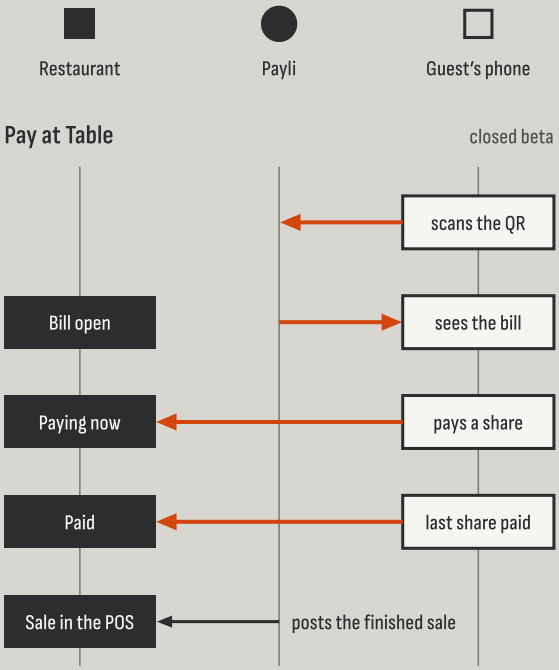

A three-way match between Payli's ledger, the payment provider and the POS, run on demand.

Cedar & Sage is a fictional venue used for illustration.

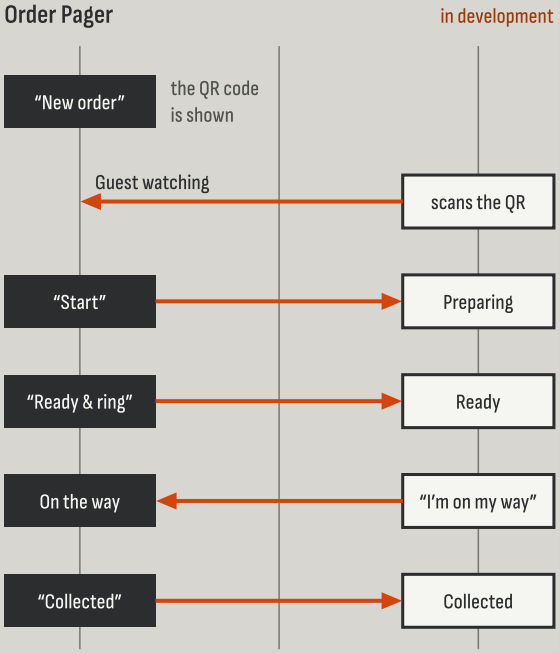

What it does. What that is worth.

Capability	What the restaurant gains
Guests pay from their own phone when they are ready, without waiting for staff.	**Tables free up sooner at the end of the meal**
No bill run and no terminal run.	**The team stays on the floor**
Split evenly, by item or any amount. Nobody pays twice for the same item.	**Split bills without disputes**
A tip step on every payment. Tips shown apart from sales. No Payli fee on tips.	**Tips recorded cleanly**
An append-only ledger to the fils, a spreadsheet export, and only fully paid bills in the POS.	**An exact close**
Payments settle to your own merchant account. Payli's fees are invoiced, never deducted.	**Your money stays yours**
Guests use their phones. Staff use a browser. You print a QR for each table.	**Nothing to install, nothing to buy**
English or Arabic on every guest screen.	**Guests are served in their language**
A rating and a comment after paying, in the dashboard.	**Feedback while it matters**
Order Pager, in development	
The guest's own phone is the pager.	**No buzzers to buy, charge or lose**
The alert reaches the guest wherever they sit.	**Guests can sit down instead of hovering at the counter**
Logo, colours, theme and wording, in English and Arabic.	**Your brand on the guest's phone**
An estimate that staff can change, and that never invents a number.	**Honest wait times**

The workflow, both sides

Only a fully paid bill is posted. Partial payments never are.

Only staff move an order. The board reports that the phone received the alert, never that someone heard it.

Book a 15-minute walkthrough.

Time with the Payli team, on your own menu. You see the guest's side on your phone and the restaurant's side in a browser.

Sunday to Thursday, business hours in Amman. We reply within one business day, in English or Arabic.

What you need

- A POS Payli connects to, or one you would like us to connect.
- A merchant account with a licensed payment provider.
- Any tablet, phone or laptop with a browser.
- A printed QR code for each table.

Connections

AQUA POS	In development
Foodics	In development
Oracle MICROS Simphony	Planned
POSRocket	Planned
Payments	A licensed provider

"In development" means the connector is being built and tested against the vendor's test system. It is not live at any restaurant. "Planned" means not built yet. We confirm which payment provider is available for your venue in the walkthrough.

Payli is in closed beta in Amman, Jordan. No restaurant is live yet.

Order Pager is in development and not yet live at any venue. Cedar & Sage is a fictional venue used for illustration. There is no published price list; pricing depends on the venue and is covered in the walkthrough. No hardware to buy.

Payli is operated by a company registered in the Hashemite Kingdom of Jordan. Payli at payli.io is not affiliated with other companies or apps that use the name Payli or PayLi. Photographs are for illustration and do not show Payli restaurants.
