Now in closed beta · Amman, Jordan

The bill comes to the table. Nobody waits for it.

Pay-at-table software for restaurants in Jordan. Guests scan, split, tip and pay from their own phone; your floor, your POS and your books stay exact to the fils.

For your guests

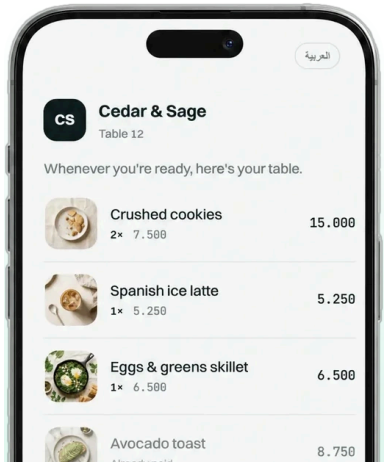

Scan. Split. Tip. Pay.

Four steps from "we're done" to paid. No app to download, no account, no Wi-Fi password.

01 · SCAN

The bill opens itself

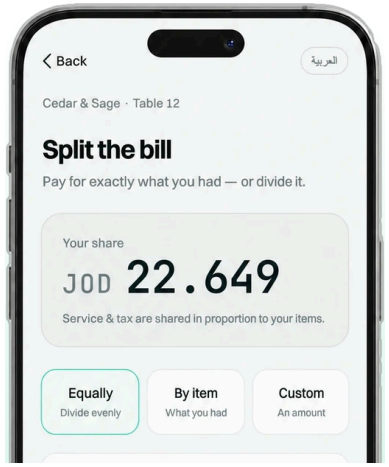

One QR per table opens the itemised bill in the browser, in English or Arabic.

02 · SPLIT

Evenly, by item or any amount

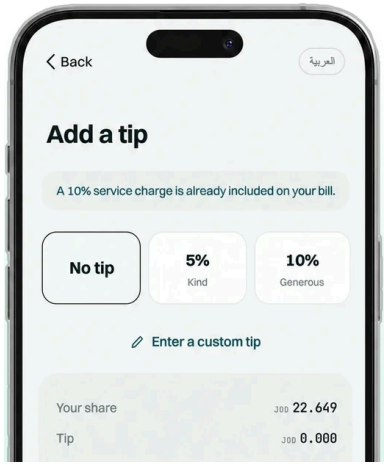

Service and tax follow the items. Nobody pays twice.

03 · TIP

A thank-you in one tap

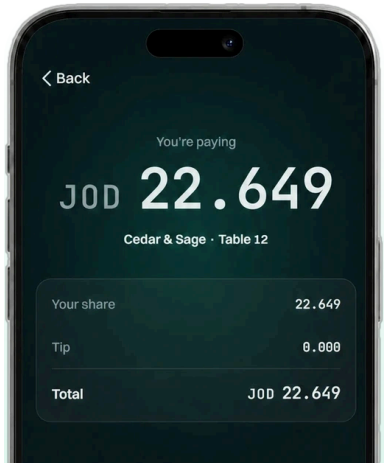

5%, 10%, custom or none. Payli takes no fee on tips.

04 · PAY

On the provider's secure page

Visa or Mastercard, plus Apple Pay and Google Pay where enabled.

The problem

The last five minutes of dinner are the slowest part of it.

The meal is over, but the table isn't free. Everyone waits on the same few steps: get the check, bring the machine, work out who owes what.

01

For your guests

Waiting to be allowed to leave

Catching a server's eye, waiting for the check, waiting for the card machine, then doing arithmetic at the table.

With Payli

They pay from their own phone the moment they're ready, and split it fairly in a few taps.

02

For your team

Busy hands at the busiest moment

Printing checks, walking terminals across the room and splitting bills by hand while new tables are waiting.

With Payli

The floor board shows which tables are paying and paid, so staff stay on the floor.

03

For your business

Tables held, slips to reconcile

Seats stay occupied after the meal ends, and the day closes with a pile of slips to match against the bank.

With Payli

Every bill, split and tip is recorded to the fils and exports as one clean file.

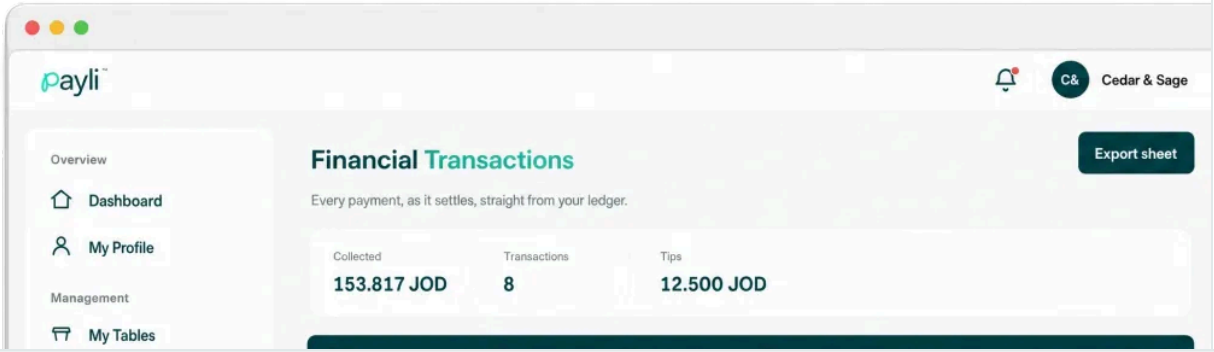

For restaurants and cafés

One dashboard runs the floor, the payments and the close.

In a web browser, on any tablet, phone or laptop. Nothing to install, nothing to buy. The dashboard is in English; the guest flow is bilingual.

Every payment, itemised, as it happens

Table, bill, tip, total, method and time. Print receipts, refund with a reason, export CSV.

Exact to the fils

Every bill, split, tip and refund in a double-entry, append-only ledger, ready to match your provider's settlement.

.000

LF

Live floor

Bill open, paying now, paid: readable from two metres, with QR codes for every table.

MN

Menu manager

Imported from your POS where supported, with Arabic item names.

PS

POS sync & ratings

Sync status for every paid bill with retry, and every rating with its table and time.

What changes on your floor

Faster tables, freer staff, numbers that close.

Every outcome comes from something the product does. Ask us to show any of them in the demo.

01
Tables free up sooner
Guests pay the moment they're ready, instead of waiting for the check and the card machine.

QR → live bill → split → pay

02
Staff stay on the floor
No terminals walked across the room. The board shows who has paid.

Live floor board

03
Splitting stops being a problem
Service and tax follow the items; nobody pays twice.

Proportional, to the fils

04
Tips at the right moment
Asked while the service is fresh; the full tip goes to the restaurant.

No Payli fee on tips

05
The day closes exact
Every bill, split, tip and refund, ready to match your provider's settlement.

Double-entry ledger · CSV

06
No re-keying at the till
The fully paid sale goes back to your POS with items, tax, tip and tender.

POS connector · in development

07
You hear about every table
Ratings and comments arrive while the guest is still there.

1–5 stars after payment

08
Nothing to install or buy
Guests use their own phones; your team uses the dashboard in a browser.

No app · no hardware

Estimate it with your numbers

What are the last five minutes worth to your venue?

Your venue	Example	Yours
A · Tables	20	
B · Seatings per table on a busy night	2	
C · Minutes saved per seating Your estimate of the wait between "we're done" and "we've paid"	5 min	
D · Average seating length	75 min	
E · Average bill per table	JOD 35	
F · Busy nights per month	12	
Extra seatings per month A × B × C ÷ D × F	32	
Revenue capacity per month Extra seatings × E	JOD 1,120	

In the example

Table time freed per busy night

3.3 h

5 minutes × 2 seatings × 20 tables = 200 minutes

Extra seatings that time could hold

32 /month

200 ÷ 75 minutes × 12 busy nights

Revenue capacity of those seatings

JOD 1,120

32 seatings × JOD 35 average bill

An illustration built only from the numbers entered. It is capacity, not a forecast: it becomes revenue only on nights when guests are waiting for a table. Payli has no measured results from live restaurants yet.

How money moves

Payli is software. It never holds your money.

Guests pay through a licensed payment provider, and the money settles directly into your own merchant account. You stay the merchant of record.

Guest
own phone, card or wallet

→

Licensed payment provider
hosted secure page

→

Your merchant account
merchant of record

Payli sends the bill, records the payment and posts the sale. Data only, never money.

Card details never touch Payli

Entered on the provider's own secure page. Payli never sees or stores the full card number or security code; 3-D Secure applies where the bank requires it.

Refunds come from your provider

Your team starts a refund in the dashboard; the provider returns it to the guest's original card. Payli never funds or holds a refund.

Fees invoiced, never deducted

Payli invoices its own fees separately and takes no fee on tips. Your provider's card fees follow your merchant agreement.

Honest about the beta: Payli is not a bank or a licensed payment company; the provider holds the licence. Payli hasn't yet been independently audited or certified, including against PCI DSS, and doesn't claim to be.

Integrations

Works alongside the systems you already run.

The bill comes from your POS, the payment goes through a licensed provider to your account, and the finished sale lands back in your POS.

AQUA POS

In development

Imports your menu and posts every fully paid table back as a sale. Being tested on AQUA's test server.

Foodics

In development

Reads the live order on each table. Staff confirm the paid order in the Foodics cashier.

POSRocket

Planned

Planned together with Foodics, which acquired POSRocket.

Oracle MICROS Simphony

Planned

Designed to post each fully paid table as a check with its tender and tip.

Licensed payment provider

In testing

Visa and Mastercard, plus Apple Pay and Google Pay where the provider enables them, on its own secure page. CliQ isn't supported.

Point of sale
A POS Payli connects to, or one you'd like us to

Payments
A merchant account with a licensed provider

Devices
Any tablet, phone or laptop with a browser

Tables
A printed QR code for each table

Status as of November 2026. In development: being built and tested against the vendor's test system; not yet live at any restaurant. Planned: not built yet.

Getting started

From a 15-minute demo to your first paid table.

We're choosing a small first group of restaurants in Amman.

1

See it on your phone

A 15-minute demo of the guest's side and yours, with your questions answered.

2

Check the fit

We confirm your POS, payment provider and what's ready for your venue today.

3

Set up your venue

We create your venue, connect your POS and bring in your menu and service charge.

4

A QR on every table

Add your tables in the dashboard and print a QR code for each one.

5

Brief the team

The floor board, receipts and refunds take minutes to learn. Then your first tables pay.

0

Hardware to buy. Guests use their own phones; staff use a browser.

0

Payli fee on tips. The full tip goes to the restaurant.

Invoiced

Fees billed separately, never deducted from your payments.

Per venue

No price list. Pricing depends on your venue; we walk you through it in the demo.

Before you ask

Questions restaurant owners ask.

Is Payli live yet?

Payli is in closed beta in Amman and talking to its first restaurants. No restaurant is live yet, and we say plainly what works today and what's coming.

Does Payli hold our money?

Never. A licensed payment provider processes each payment and settles it into your own merchant account. You're the merchant of record.

When do we receive our money?

Straight from your payment provider, on the schedule in your merchant agreement. Payli doesn't set or control that schedule.

Does Payli replace our POS?

No. The bill comes from your POS, and when the table is fully paid the sale is posted back to it.

Do guests need an app?

No. The QR opens the bill in the browser: no app, no account, no Wi-Fi password, and no name, email or phone number to pay.

Who handles refunds and chargebacks?

The restaurant, as the merchant of record. Your team starts a refund in the dashboard; your provider returns it to the guest's original card.

How are card details protected?

They're entered on the provider's secure page, so Payli never sees or stores the full card number or security code.

Does it work in Arabic?

The guest flow is in English and العربية, switched with one tap, with amounts in JOD to three decimals. The restaurant dashboard is in English today.

Bring Payli to your floor.

Book a 15-minute demo and see Payli on your own phone, with your own menu. We're choosing a small first group of restaurants in Amman.

Based in
Amman, Jordan

Payli is software for restaurants, built by a company registered in the Hashemite Kingdom of Jordan. It never holds or moves money: payments are processed by licensed payment providers and settle directly to each restaurant's own merchant account. Product screens use demo data; Cedar & Sage is a fictional venue. Statuses as of November 2026.
